Federal Aviation Administration

Memorandum

Date: MAR 0 9 2015

To: Al Spence, Directives Program Manager, Office of the Deputy Assistant Administrator for Information and Technology, ASP-110

From: Victor Wicklund, Manager, Propulsion & Mechanical Systems Branch, Transport Airplane Directorate Standards Staff, ANM-112

Subject: Request for Closure of Obsolete Directives

We have recently reviewed several directives as part of the annual FAA directives revalidation exercise. We have identified three directives that we have superseded with formal guidance or policy, that are project specific and do not serve as generally applicable policy, or that are otherwise outdated. We request your assistance in formally closing the following directives:

8110.16, "Fire Extinguishing Requirements for APU Compartments," August 1976

8110.20, "FAR [sic] 25.1203: Inflight Monitoring of Fire Detection Systems," August 1976

8110.27A, "CAR 4b.383 and FARs [sic] 25.855 and 25.857, Cargo Compartment Classification Requirements," April 1979

Thank you for your assistance.
