2. Introduction

This document is the Federal Aviation Administration (FAA) Approved Model List (AML) for Supplemental Type Certificate (STC) Number SA01340WI, for a group Reduced Vertical Separation Minimum (RVSM) Airworthiness Approval for the Cessna Model 441 aircraft.

Revisions to the AML must be coordinated between the STC holder and the responsible Aircraft Certification Office (ACO), and require FAA approval.

This STC is only applicable to the 14 CFR, Part 23, Class III aircraft, as defined in Advisory Circular (AC) 23.1309-1C, which are listed in this AML. Installations in 14 CFR, Part 23 Class I, II, and IV, Part 25, Part 27 and Part 29 aircraft are not authorized under this STC.

This STC assumes the prerequisite equipment (air data, automatic altitude control, altitude alerting, and altitude reporting systems) is already installed on each airplane eligible for this proposed group in accordance with the STCs identified in Section 3. The prerequisite equipment must be properly linked to meet the intended function for the system, as certified under this AML approval.

This AML does not constitute approval to conduct RVSM operations.

The airplane is not permitted to operate in RVSM airspace if the static ports are damaged or if damage or surface irregularities are found within the RVSM Critical Region.
